

Keep Your Data (and Your Reputation) Safe

CloudConnexions equips your organization with the tools and talent to defend against the growing threat of cyberattack.

Ransomware, hacks, attacks, vulnerabilities, and data theft have a daily effect on organizations worldwide. Cybersecurity experts agree that a business should no longer wonder if they're going to be attacked, but *when* and *how*.

Such attacks are often extremely costly, causing significant downtime and often incurring regulatory fines. CloudConnexions will help you avoid these outcomes by fortifying your network, monitoring your data, and eliminating vulnerabilities in your software.

Cybersecurity Services

- Identifying assets and data that need protection
- Protecting your assets
- Training your staff to avoid common threats
- Maintaining compliance
- Detecting incidents
- Responding with incident and breach actions
- Recovering from an incident

Data Protection and Cyber Defense

CloudConnexions will provide the necessary threat intelligence to detect and counter intrusions, close off vulnerabilities, and securely back up your data. We have years of field experience using the best security tools available to keep our clients safe.

Our team is experienced in dealing with the full spectrum of cyberthreats, and we'll work with you to create a comprehensive, end-to-end cybersecurity strategy. Our team of IT security experts will develop a solution that fits your unique needs while staying within your budget.

Cyber Risk Assessments from CloudConnexions

We conduct a cyber risk assessment to help you understand your risk profile and better make informed decisions about security. Once potential threats and vulnerabilities have been identified, they can be mitigated to prevent or reduce security incidents which saves your organization money and/or reputational damage.

- Our security risk assessment process helps you understand and act on the following:
- What are your most important information technology assets and are sufficient backups in place to protect them?
- What data breach would have a major impact on our business whether from malware, cyberattack or human error?
- What threat sources can be identified? (And what threats may we be unaware of?)
- How could each identified threat impact your organization?
- What are your internal and external vulnerabilities?
- How can they be exploited, and what is the likelihood of such an exploit?
- Which security incidents could cause substantial downtime or operational disruptions?
- What is the level of risk are you willing to take?

CloudConnexions: Your Partner in Risk Mitigation

In the current threat landscape, your business needs to take a serious approach to security and data privacy. The CloudConnexions team brings the solutions and expertise that result in a proactive, effective cybersecurity posture – and far fewer worries for you and your staff.
