

Support Services for All Devices and Operating Systems

CloudConnexions helps you get the most from your devices, workstations, and servers, regardless of operating system.

Support for Windows, Apple, and Linux Devices

Our managed services include complete support for Windows PC workstations and servers, as well as Mac and Linux machines. Our team can ensure that your technology assets are running smoothly – whether they're physical devices or remote virtual machines.

More importantly, we will help you keep your network secure in the world of remote workforces and bring-your-own-devices (BYOD). Our team can develop a comprehensive cybersecurity stack that keeps your data safe regardless of the number, location, and types of devices used by your staff.

Support for iOS/Mac OS

More and more companies are bringing Apple computers into their workplaces, and we're ready to help them stay productive. Our computer services and network solutions include Mac support and services.

Even though Mac products are known for ease of use and simplicity, all computer systems require technical support and service from time to time. Our expert team will make sure your systems are properly integrated, up-to-date, and working when you need them.

Hybrid IT Environments

If you need a Mac server or need to integrate Macs into your existing PC-based network, we can help get your office configured correctly the first time. Need to run two operating systems in parallel? CloudConnexions can set up your office so your employees can switch between Windows and Mac OS on the same machine.

All Device Support from CloudConnexions

- Windows PC or Mac workstation installation and configuration
- Support for virtual machines and servers
- Mac/Windows/Linux servers and infrastructure
- Mac/PC/Linux troubleshooting and help desk support
- Mac/PC/Linux monitoring, patching, and file security

Our support solutions integrate software and hardware across teams, to enable constant collaboration whether in the office or working from home.

We know you want your teams to have access to the latest software and hardware to maximize their productivity. If your staff has trouble sharing files to work collaboratively, or they struggle with slow machines, their productivity drops. CloudConnexions will help you overcome obstacles to working efficiently and getting the job done.
